It's widely used in training for professionals who manage conflict, behavioral disruptions, and potential violence, particularly in healthcare, education, and social services settings.

This model breaks down the development of a crisis into distinct stages, helping responders identify early warning signs and intervene appropriately before situations escalate further. Understanding these phases is crucial to applying de-escalation techniques and ensuring safety for all involved.

Stages of the CPI Crisis Development Model

The CPI model typically outlines six stages of crisis escalation:

1. **Anxiety** – The individual shows signs of discomfort or unease.
2. **Defensive** – The person becomes defensive, possibly challenging authority.
3. **Acting Out** – Behaviors become more intense and potentially disruptive.
4. **Tension Reduction** – The individual begins to calm down.
5. **Recovery** – Reflection and return to baseline behavior.
6. **Post-Crisis Depression** – Emotional or physical letdown following the incident.
