pharmacology online practice 2019 a: Advancing Research on Teachers' Professional Vision: Implementing novel Technologies, Methods and Theories Christian Kosel, Tina Seidel , Christian Hartmann, Ann-Sophie Grub, 2024-07-25 A classroom full of students can be overwhelming for teachers. It is critical that teachers are able to filter and meaningfully interpret the relevant information in this complex scenario. Much of this filtering and interpretation occurs through selective visual perception. Over the last decade, a rapidly growing number of studies in empirical educational research used eye tracking to investigate teachers' selective visual perceptual processes in the classroom. Theoretically, visual attention and perception are often conceptualized as knowledge-based noticing coupled with knowledge-based reasoning about what is visually perceived. Recent eye-tracking studies have shown that experienced teachers, in particular, show improved selective attention of classroom events through faster detection of relevant information and improved monitoring of learning-relevant situations. Researchers agree that a critical driver of selective attention processes is the professional knowledge (declarative, procedural, and metacognitive) of (experienced) teachers, which controls selective perceptual processes in a top-down process. The findings are significant and provide important insights for research on teacher professionalization.

pharmacology online practice 2019 a: *Diagnosis and Management of Acute, Chronic, and Autoimmune Pancreatitis* Ravi Kumar Sharma, Francesco Vitali , Puneet Chhabra, 2024-12-02 Pancreatitis is a condition characterized by pancreas inflammation and can be categorized into acute, chronic, and autoimmune. Common causes of acute pancreatitis include alcohol abuse, gallstones, and hyperlipidemia. Acute pancreatitis can be classified into mild, moderate, and severe forms. Mild and moderate cases typically require conservative management, while severe cases may necessitate admission to the intensive care unit and intervention. Chronic pancreatitis can be caused by alcohol abuse, idiopathic factors (unknown cause), and sometimes genetic factors. Autoimmune pancreatitis is an inflammation of the pancreas from an autoimmune etiology. Diagnosing severe acute pancreatitis is crucial due to the substantial mortality associated with severe cases. Early diagnostic markers, severity scoring, and various imaging techniques, including radiological and endoscopic methods, play key roles in the management of acute pancreatitis. Surgical intervention may also be necessary in severe cases. For chronic pancreatitis, effective pain management and addressing endocrine and exocrine insufficiency are essential. Additionally, controlling sugar levels and regular follow-ups are crucial for detecting the development of pancreatic cancer. Autoimmune pancreatitis mimics pancreatic cancer, posing a challenge for diagnosis. Pain management in autoimmune pancreatitis is an important aspect. Therefore, identifying novel early markers for the differential diagnosis of pancreatic cancer and autoimmune pancreatitis is crucial.

pharmacology online practice 2019 a: The Routledge Handbook of Post-Prohibition Cannabis Research Dominic Corva, Joshua Meisel, 2021-09-06 The place of cannabis in global drug prohibition is in crisis, opening up new directions for socially engaged cannabis research. The Routledge Handbook of Post-Prohibition Cannabis Research invites readers to explore new landscapes of cannabis research under conditions of legalization with, not after, prohibition: post-prohibition. The chapters are organized into five multidisciplinary sections: Governance, Public Health, Markets and Society, Ecology and the Environment, and Culture and Social Change. Case studies from the United States, Uruguay, Morocco, and the United Kingdom show readers alternative ways of thinking about human-cannabis relationships that move beyond questions of legality and illegality. Representing a cross-section of cannabis scholarship, the contributors provide readers with critical perspectives on legalization that are not based upon orthodoxies of prohibition. While legalization signals a global shift in the legitimacy of cannabis research, this collection identifies openings for academics, policy

makers, and the public interested in ending the drug war, as well as a way to address broader social problems evident in the age of neoliberal governance within which prohibition has been entangled.
