g1 practice test ontario: Ten-year Height Growth of Open-pollinated Black Spruce Families in Ontario Timothy James Butler Boyle, Petawawa National Forestry Institute, 1986 Results of 10-year height growth in three series of open-pollinated progenytests of black spruce, in three site regions of northern Ontario, are presented. Estimates of narrow sense heritability from individual test sites ranged from 0 to 0.399 for single trees and from 0 to 0.896 for families, with averages of 0.169 and 0.663 respectively. Estimates from multi-location analyses ranged from 0.099 to 0.152, with an average of 0.124 for single trees, and from 0.836 to 0.930, with an average of 0.884 for families. The family x environment interaction was significant in all three series. By means of an overlapping cluster analysis method, genetic breeding zones were delineated for each site region. Proposals are made for breeding zones which take account of both genetic breeding zones and administrative boundaries.

g1 practice test ontario: Gravity and Geoid Hans Sünkel, Iginio Marson, 2012-12-06

Recognizing the increasing importance of the role of gravity and the geoid, and considering the substantial synergistic effects which result from close cooperation, the International Gravity Commission and the International Geoid Commission, both scientific bodies of the International Association of Geodesy, decided to hold a Joint Meeting under the common topic Gravity and Geoid in Graz, Austria, from Sept. 11 - 17, 1994. The earth's gravity field is increasingly attracting the attention of the geosciences for many reasons. As a response of the earth's internal mass distribution, it significantly helps us to understand the structure of the earth and its dynamics. On the other hand, the earth's gravity field controls the orbits of satellites and is of paramount importance for accurate orbit prediction'. For geodesy the geoid, representing the gravity field, serves as a unique height reference surface. It is the link between satellite-derived positions and useful geodetic coordinates of utmost precision. For oceanography, the offset of the dynamic ocean surface from the geoid is the signal which bears important information about ocean circulation patterns.
