introduction to geography people places and environment 5th edition: Mobilities of Self and Place Mahni Dugan, 2019-11-16 When it comes to migration, there is no level playing field. Some people are privileged, advantaged, and supported and others are marginalised, persecuted, and traumatised. The extension of the rights and equalities for which many people advocate, and provision of other extrinsic conditions are insufficient for wellbeing. This work asks: what is sufficient? What is it that people do—and can do—to change their experience from suffering to wellbeing when handling challenges of migration and other mobilities? What helps people when they are migrating? What have migrants experienced and learned that could be useful to others facing challenges of mobility and change? How can this learning be applied to promote greater social wellbeing and care of environments, in an increasingly mobile world? Mobilities of Self and Place documents rich conversations with regular migrants and refugees to critically consider migration history, human rights, place, self, and mobilities studies. The work explores ontological and epistemological questions of sense of self, sense of place, identity and agency. Mahni Dugan helps us understand how the relationship between sense of place and sense of self affects the ability of migrants to relocate with wellbeing. The movement from global to local, social to personal,

intellectual to experiential offers a broad societal understanding of the phenomena and challenges of contemporary mobilities.

introduction to geography people places and environment 5th edition: **The Muslim World in the 21st Century** Samiul Hasan, 2012-01-15 Islam is not only a religion, but also a culture, tradition, and civilization. There are currently 1.5 billion people in the world who identify themselves as Muslim. Two thirds of the worldwide Muslim population, i.e. approximately a billion people, live in forty-eight Muslim majority countries (MMC) in the world- all of which except one are in Africa and Asia. Of these MMCs in Africa and Asia, only twelve (inhabited by about 165 million people) have ever achieved a high score on the Human Development Index (HDI), the index that measures life expectancy at birth, education and standard of living and ranks how developed a country is. This means that the majority of the world's Muslim population lives in poverty with low or medium level of human development. The contributions to this innovative volume attempt to determine why this is. They explore the influence of environment, space, and power on human development. The result is a complex, interdisciplinary study of all MMCs in Africa and Asia. It offers new insights into the current state of the Muslim World, and provides a theoretical framework for

studying human development from an interdisciplinary social, cultural, economic, environmental, political, and religious perspective, which will be applicable to regional and cultural studies of space and power in other regions of the world.

Geography Today: An Encyclopedia of Concepts, Issues, and Technology approaches the study of geography by concept, in contrast to most other works, which are organized by world region. Geography curriculums have been moving away from teaching the topic on a regional basis and toward teaching it through broader concepts. This is modeled by the National Geography Standards, the National Council for Geographic Education's Roadmap for 21st Century Geography Education, Texas Essential Knowledge and Skills Resource System, and ABC-CLIO's own geography advisory board, comprised of high school geography teachers from across the United States. By introducing geography concepts, Geography Today sets the foundation for readers to understand why certain geographies may be the way they are. It further helps high school geography students to apply concepts to different contexts with 101 geography terms, themes, and concepts for quick-reference research and study.
