Para ello se desarrolla un modelo de competencia oligopolística y se analizan las propiedades del equilibrio de mercado en términos de beneficios, cuota de mercado y micro y macro estabilidad financiera cuando un banco comercial, maximizador de beneficios, compite contra un banco no orientado hacia los beneficios (stakeholder bank). Los resultados teóricos son validados empíricamente usando datos bancarios de 72 países durante el periodo 1997-2007. Concretamente se muestra que a) los stakeholder banks son menos arriesgados que los bancos comerciales, b) cualquier banco es más arriesgado cuando compite contra un stakeholder bank en lugar de contra un banco comercial, c) a nivel sistémico la presencia de stakeholder banks aumenta la estabilidad financiera, d) el efecto de la regulación bancaria y de la competencia en la toma de riesgos depende de la estructura de propiedad del banco, e) la concentración accionarial incrementa el riesgo bancario, f) el diseño de los incentivos gerenciales tiene un efecto muy significativo sobre la toma de riesgos bancarios.
