Flemming, 2015-07-21 Excerpt from Practical Tanning: A Handbook of Modern Processes, Receipts, and Suggestions Treatment of Hides, Skins, and Pelts, of Every Description Practical Tanning, here presented for the consideration and guidance of the Leather Industrials of the United States and foreign countries is distinctively an American up-to-date treatise; no English, French or German book having been consulted in its preparation. Furthermore, in it will be found nothing whatever copied from any previously printed American book. It is what its title imports, A Hand-Book of Modern Processes, Receipts and Suggestions for the Treatment of Hides, Skins and Pelts of Every Description. It is the result of the experience and study of the author and of those of many other practical men with whom it has been his good fortune to come into association and consultation. One special feature of the volume to which he would call attention is that of the chapters on the Patented Processes of Tanning, Tawing, Depilating and Bating. These patents, which are given with sufficient detail to be clearly understood, serve to indicate the aims and ends of the most progressive and most intelligent investigators among tanners and chemists in the direction of placing this great industry upon a scientific basis, and what has been accomplished in that direction. The patents, the author has in most cases given with proper reserve, and without actual endorsement; but they are all suggestive,

and therefore worthy of examination and investigation. In writing this book the author has aimed to put before his readers information relating to the manufacture of many kinds of leather at once valuable and interesting. He makes no claim to infallibility nor to be above criticism. The book does not cover the entire field of leather manufacture; it does, however, contain a large amount of practical information so presented that the leather worker can readily understand it, and having made it a part of his mental capital can utilize it with benefit to himself and to the product of his skill.
