Yet scholars remain sharply divided as to a coherent theoretical model of this phenomenon and many have called for further empirical research. This volume pursues this line of inquiry, examining a variety of geographical contexts within the English-speaking world, including Australia, Canada, India, the United Kingdom and the United States at different historical periods. These interdisciplinary studies combine elements of sociology, political science, history, literature, and cultural studies.

Scott, 2016-08-18 In this important book, Nicholas Hartlep and Daniel Scott's detailed analyses on both visual and historical representations of Asian Americans in textbooks and teacher manuals used in our elementary and secondary schools poignantly tell us that generations of children are growing up being fed this single story about Asian Americans. As Hartlep and Scott write. Asian Americans have once again been constructed as the "good minority" that can succeed on their own and be used as a political instrument to shame the Blacks for their underachievement

and their fight for equality. Over and over again, the media has been telling “a single story” about Asian Americans to the public for the past fifty years. The consequence of this fabricated story is that it “discourages others—even Asian-Americans themselves—from believing in the validity of their struggles” (Linshi, 2014, p. 1).

our nation macmillan mcgraw hill: *Nationalism and History Education* Rachel Hutchins, 2016-02-26 History education, by nature, transmits an ‘official’ version of national identity. National identity is not a fixed entity, and controversy over history teaching is an essential part of the process of redefining and regenerating the nation. France and the United States have in particular experienced demographic and cultural shifts since the 1960s that have resulted in intense debates over national identity. This volume examines how each country’s national history is represented in primary schools’ social studies textbooks and curricula, and how they handle contemporary issues of ethnicity, diversity, gender, socio-economic inequality, and patriotism. By analyzing each country separately and comparatively, it demonstrates how various groups (including academics, politicians and citizen activists) have influenced education, and how the process of writing and rewriting history perpetuates a nation. Drawing on empirical studies of the United States and France, this volume provides insight into broader nationalist processes and instructive principles for similar countries in the modern world.

Swartz, 2015-08-27 The Afrocentric Praxis of Teaching for Freedom explains and illustrates how an African worldview, as a platform for culture-based teaching and learning, helps educators to retrieve African heritage and cultural knowledge which have been historically discounted and decoupled from teaching and learning. The book has three objectives: To exemplify how each of the emancipatory pedagogies it delineates and demonstrates is supported by African worldview concepts and parallel knowledge, general understandings, values, and claims that are produced by that worldview To make African Diasporan cultural connections visible in the curriculum through numerous examples of cultural continuities--seen in the actions of Diasporan groups and individuals--that consistently exhibit an African worldview or cultural framework To provide teachers with content drawn from Africa's legacy to humanity as a model for locating all students--and the cultures and groups they represent--as subjects in the curriculum and pedagogy of schooling This book expands the Afrocentric praxis presented in the authors' Re-membering History in Teacher and Student Learning by combining re-membered (democratized) historical content with emancipatory pedagogies that are connected to an African cultural platform.

our nation macmillan mcgraw hill: *The Culture of Education Policy* Sandra Stein, 2004 This powerful book shows the many unintended ways in which social and educational policy can shape, if not constrain, the work of educating students. Focusing on the creation and history of Title I of the Elementary and Secondary Education Act (ESEA) from its inception in 1965 to the present, Stein shows how underlying assumptions of policymakers and bureaucratic red tape actually interfere with both educational practice and the goals of the legislation itself. This examination is especially timely, given the recent passage of the No Child Left Behind Act and its sweeping attempts to raise achievement and reduce failure, especially for underserved populations. This invaluable volume: Offers an innovative framework for the analysis of education policy that can be applied to other government initiatives, particularly those directed at the poor. Challenges prevailing assumptions about children and poverty and the organizational strategies for addressing their needs. Brings the reader into the halls of Congress, analyzing the language of Congressional floor debates, showing shifts in how students have been characterized and their needs defined over time. Presents a fresh perspective on the controversial No Child Left Behind Act, the most recent reauthorization of ESEA, as well as federal desegregation and bilingual policies. Provides intimate portraits of nine elementary schools, presenting the language and routines of schooling to demonstrate how practitioners react to the culture of education policy in practice. "This book breaks new ground! Stein demonstrates the ways in which the language and symbols that are used work to delimit not only our understanding of the problems federal policy addresses, but the range of solutions it deploys. A foundational piece of work." —Jean Anyon, Graduate Center, City University of New York
