us history volker janssen: Where Minds and Matters Meet Volker Janssen, Amy Bix, Linda Nash, 2012-12-12 The American West—where such landmarks as the Golden Gate Bridge rival wild landscapes in popularity and iconic significance—has been viewed as a frontier of technological innovation. *Where Minds and Matters Meet* calls attention to the convergence of Western history and the history of technology, showing that the region's politics and culture have shaped seemingly placeless, global technological practices and institutions. Drawing on political and social history as well as art history, the book's essays take the cultural measure of the region's great technological milestones, including San Diego's Panama-California Exposition, the building of the Hetch Hetchy Dam in the Sierras, and traffic planning in Los Angeles. us history volker janssen: Mississippi and the Great Depression Richelle Putnam, 2017 Join author Richelle Putnam as she recounts how Mississippian's resolve and fortitude brought the state

through one of the hardest economic times in American history. When the Great Depression erupted, Mississippi had not yet recovered from the boll weevil or the Flood of 1927. Its land suffered from depleted forests and soil. Plus, the state had yet to confront the racial caste systems imprisoning poor whites, African Americans and other minorities. Nevertheless, innovative Mississippians managed to keep their businesses and services open. Meanwhile, President Franklin D. Roosevelt's New Deal programs fostered economic stimulation within the state. Author Richelle Putnam also highlights the state's spiritual and cultural giants, who rose from the nation's poorest state to create a lasting footprint of determination, pride and hope during the Depression era.

us history volker janssen: Caging Borders and Carceral States Robert T. Chase, 2019-04-09 This volume considers the interconnection of racial oppression in the U.S. South and West, presenting thirteen case studies that explore the ways in which citizens and migrants alike have been caged, detained, deported, and incarcerated, and what these practices tell us about state building, converging and coercive legal powers, and national sovereignty. As these studies depict the institutional development and state scaffolding of overlapping carceral regimes, they also consider how prisoners and immigrants resisted such oppression and violence by drawing on the transnational politics of human rights and liberation, transcending the isolation of incarceration, detention, deportation and the boundaries of domestic law. Contributors: Dan Berger, Ethan Blue, George T. Díaz, David Hernandez, Kelly Lytle Hernández, Pippa Holloway, Volker Janssen, Talitha L. LeFlouria, Heather McCarty, Douglas K. Miller, Vivien Miller, Donna Murch, and Keramet Ann Reiter.

us history volker janssen: Doing Time in the Depression Ethan Blue, 2014-11-22 As banks crashed, belts tightened, and cupboards emptied across the country, American prisons grew fat. *Doing Time in the Depression* tells the story of the 1930s as seen from the cell blocks and cotton fields of Texas and California prisons, state institutions that held growing numbers of working people from around the country and the world—overwhelmingly poor, disproportionately non-white, and displaced by economic crisis. Ethan Blue paints a vivid portrait of everyday life inside Texas and California's penal systems. Each element of prison life—from numbing boredom to hard labor, from meager pleasure in popular culture to crushing pain from illness or violence—demonstrated a contest between keepers and the kept. From the moment they arrived to the day they would leave, inmates struggled over the meanings of race and manhood, power and poverty, and of the state itself. In this richly layered account, Blue compellingly argues that punishment in California and Texas played a critical role in producing a distinctive set of class, race, and gender identities in the 1930s, some of which reinforced the social hierarchies and ideologies of New Deal America, and others of which undercut and troubled the established social order. He reveals the underside of the modern state in two very different prison systems, and the making of grim institutions whose power would only grow across the century.

us history volker janssen: Transplanting Modernity? Thomas B. Robertson, Jenny Leigh Smith, 2023-10-24 In general, "development" denotes movement or growth toward something better in the future. International development—widespread in the decades following World War II—was an

effort at purposeful change in landscapes around the world. Contributors to this volume argue that these projects constituted an effort to transplant modernity, such as knowledge or technology, from places seen as more developed to places perceived as un- or underdeveloped. During its heyday, international development included not just dams, roads, health programs, and agricultural projects but also animal husbandry schemes, urban development, and wildlife protection plans. Projects often succeeded or failed because of existing environmental conditions, and in turn, these programs remade—or tried to remake—the land, water, wildlife, and people around them. From American-directed failures in water engineering in Afghanistan to the impact of livestock epidemics on economic growth in East Africa, the chapters in *Transplanting Modernity* question how science, technology, and faith in Western notions of progress have influenced the pace, scope, and scale of development.

us history volker janssen: Sand, Snow, and Stardust Gretchen Heefner, 2025-05-05 A vivid tour of US military efforts to understand, survive, and command harsh environments worldwide—and beyond. Deserts, the Arctic, outer space—these extreme environments are often seen as inhospitable places at the edges of our maps. But from the 1940s through the 1960s, spurred by the diverse and unfamiliar regions the US military had navigated during World War II, the United States defense establishment took a keen interest in these places, dispatching troops to the Aleutian Islands, North Africa, the South Pacific, and beyond. To preserve the country's status as a superpower after the war, to pave runways and build bridges, engineers had to understand and then conquer dunes, permafrost, and even the surface of the moon. *Sand, Snow, and Stardust* explores how the US military generated a new understanding of these environments and attempted to master them, intending to cement America's planetary power. Operating in these regions depended as much on scientific and cultural knowledge as on military expertise and technology. From General George S. Patton learning the hard way that the desert is not always hot, to the challenges of constructing a scientific research base under the Arctic ice, to the sheer implausibility of modeling Martian environments on Earth, Gretchen Heefner takes us on a wry expedition into the extremes and introduces us to the people who have shaped our insight into these extraordinary environments. Even decades after the first manned space flight, plans for human space exploration and extraplanetary colonization are still based on what we know about stark habitats on Earth. An entertaining survey of the relationship between environmental history and military might, *Sand, Snow, and Stardust* also serves as a warning about the further transformation of the planet—whether through desertification, melting ice caps, or attempts to escape it entirely.

Jarausch, 2024-11-01 The migration experiences, career paths, and scholarship of historians born in Germany who started emigrating to North America in the 1950s have had a unique impact on the transatlantic practice of Central European History. *German Migrant Historians in North America* analyzes the experiences of this postwar group of scholars, and asks what informed their education and career choices, and what motivated them to emigrate to North America. The contributors reflect on how these migration experiences informed their own research and teaching, and particularly discuss the more general development of the transatlantic exchange between German and American historians in the scholarship on Modern Central European History.

us history volker janssen: Fixing Niagara Falls Daniel Macfarlane, 2020-09-01 Since the late nineteenth century, Niagara Falls has been heavily engineered to generate energy behind a flowing façade designed to appeal to tourists. *Fixing Niagara Falls* reveals the technological feats and cross-border politics that facilitated the transformation of one of the most important natural sites in North America. Daniel Macfarlane details how engineers, bureaucrats, and politicians conspired to manipulate the world's most famous waterfall. Essentially, they turned this natural wonder into a

tap: huge tunnels divert the waters of the Niagara River around the Falls, which ebb and flow according to the tourism calendar. To hide the visual impact of diverting the majority of the water, the United States and Canada cooperated to install massive control works while reshaping and shrinking the Horseshoe Falls. This book offers a unique interdisciplinary perspective on how the Niagara landscape ultimately embodies both the power of technology and the power of nature.

West, 2024-09-03 Writing in a clear and comprehensive writing style, [the authors] show how the U.S. political, social, and economic environments make disinformation believable to large numbers of people and difficult to stop or prevent. - Library Journal, Starred Review Everyone, whether they work in the public sector or are private citizens, will find this book invaluable." - Booklist, Starred Review Disinformation made possible by rapid advances in cheap, digital technology, and promoted by organized networks, thrives in the toxic political environment that exists within the United States and around the world. In *Lies that Kill*, two noted experts take readers inside the world of disinformation campaigns to show concerned citizens how to recognize disinformation, understand it, and protect themselves and others. Using case studies of elections, climate change, public health, race, war, and governance, Elaine Kamarck and Darrell West demonstrate in plain language how our political, social, and economic environment makes disinformation believable to large numbers of people. Kamarck and West argue that we are not doomed to live in an apocalyptic, post-truth world but instead can take actions that are consistent with long-held free speech values. Citizen education can go a long way towards making us more discerning consumers of online materials and we can reduce disinformation risks through digital literacy programs, regulation, legislation, and negotiation with other countries.

us history volker janssen: Policing Los Angeles Max Felker-Kantor, 2018-09-25 When the Los Angeles neighborhood of Watts erupted in violent protest in August 1965, the uprising drew strength from decades of pent-up frustration with employment discrimination, residential segregation, and poverty. But the more immediate grievance was anger at the racist and abusive practices of the Los Angeles Police Department. Yet in the decades after Watts, the LAPD resisted all but the most limited demands for reform made by activists and residents of color, instead intensifying its power. In *Policing Los Angeles*, Max Felker-Kantor narrates the dynamic history of policing, anti-police abuse movements, race, and politics in Los Angeles from the 1965 Watts uprising to the 1992 Los Angeles rebellion. Using the explosions of two large-scale uprisings in Los Angeles as bookends, Felker-Kantor highlights the racism at the heart of the city's expansive police power through a range of previously unused and rare archival sources. His book is a gripping and timely account of the transformation in police power, the convergence of interests in support of law and order policies, and African American and Mexican American resistance to police violence after the Watts uprising.

us history volker janssen: The Migrant's Jail Brianna Nofil, 2024-10-22 A century-long history of immigrant incarceration in the United States Today, U.S. Immigration & Customs Enforcement (ICE) detains an average of 37,000 migrants each night. To do so, they rely on, and pay for, the use of hundreds of local jails. But this is nothing new: the federal government has been detaining migrants in city and county jails for more than 100 years. In *The Migrant's Jail*, Brianna Nofil examines how a century of political, ideological, and economic exchange between the U.S. immigration bureaucracy and the criminal justice system gave rise to the world's largest system of migrant incarceration. Migrant detention is not simply an outgrowth of mass incarceration; rather, it has propelled carceral state-building and fostered intergovernmental policing efforts since the turn of the twentieth century. From the incarceration of Chinese migrants in New York in the 1900s and 1910s to the jailing of Caribbean refugees in Gulf South lockups of the 1980s and 1990s, federal immigration authorities provided communities with a cash windfall that they used to cut taxes, reward local officials, and build bigger jails—which they then had incentive to fill. Trapped in America's patchwork detention networks, migrants turned to courts, embassies, and the media to challenge the cruel paradox of "administrative imprisonment." Drawing on immigration records, affidavits, protest letters, and a variety of local sources, Nofil excavates the web of political

negotiations, financial deals, and legal precedents that allows the United States to incarcerate migrants with little accountability and devastating consequences.
