rebecca grant aviation historian: Airpower Pioneers John Andreas Olsen, 2023-01-15 Airpower Pioneers studies twelve especially influential airmen, detailing their impact on the evolution of the United States Air Force (USAF). Rather than focus on command in a series of air campaigns, this book describes the personal qualities and careers of people who distinguished themselves first and foremost by advancing airpower theory, doctrine, and strategy, and in certain cases by implementing significant organizational changes in the USAF structure. Some held important positions during wartime, but except for a few who excelled in both combat and peace, those selected for inclusion in this volume made their main contributions to advancing aerospace power away from the front line as planners, organizers, educators, and strategists. The future of aerospace power requires airmen not only to push the limits in combat but also to emphasize, publicly and frequently, what is special and vital about airpower. The distinctive characteristics of airpower-speed, range, flexibility, precision, and lethality-have improved with every new generation of aircraft and weapon systems. The history of modern warfare is full of empirical evidence of airpower's relevance. Looking ahead, the main challenge for air forces all over the world is to match advances in technology with new ideas. All air forces need visionary men and women whose reach exceeds their grasp, who are determined to adapt to new security and defense realities rather than adhere to romanticized ideas of yesteryear, and whose organizational skills ensure successful implementation of new ideas despite inevitable resistance to change.

rebecca grant aviation historian: *USS Enterprise (CVN-65)* Mark L. Evans, 2022-07-14 This is the thrilling story of USS Enterprise (CVN-65), the world's first nuclear-powered aircraft carrier. Her story spans 51 years (1961-2012) of active service from the brink of nuclear war during the Cuban Missile Crisis to the first global cruise by nuclear-powered ships, to the first strikes during the Vietnam War, battles against the Iranians and Iraqis in the 1980s and 1990s, a pivotal role during 9/11 and the Global War on Terrorism, and hunting pirates off the Horn of Africa. More than just an operational history of Enterprise, this book recounts the experiences of the men and women who served on board--the pilots who flew from the flight deck, the men who fought to save the ship during a fire in 1969, the sailors who brought retribution against Al-Qaeda terrorists--with detailed descriptions of sorties through flak-filled skies and harrowing escapes from capture behind enemy lines. This book is dedicated to the men and women who have served on board Big E, and to those who paid the ultimate price for freedom.

rebecca grant aviation historian: Aircraft Carriers Norman Polmar, 2008-01-31 In the post-1945 era, the aircraft carrier has remained a valued weapon despite the development of nuclear weapons, cruise and ballistic missiles, and highly capable submarines. At times, as in the early days of the Korean and Vietnam Wars and in the Falklands conflict, carriers alone could deploy high-performance aircraft to the battlefield. In other operations, such as enforcing the no-fly zones and the U.S. invasions of Afghanistan and Iraq, only carriers could provide the bases needed for sustained combat and support operations. This second volume of Norman Polmar's landmark study details the role of carriers in the unification of the U.S. armed forces and strategic deterrence, fiscally constrained Great Britain, the development of British Commonwealth and ex-colonial navies, and the efforts of France and the Netherlands to rebuild their fleets. The role of the modern carrier-nine nations currently possess them-is discussed, as are the issues confronting nations that might acquire them. Chapters on the Soviet Union's effort to produce carriers are included for the first time. The development of both carrier planes and the many oddball aircraft that have flown from carriers-such as the U-2 spy plane-are also examined. Appendixes include comprehensive data on all carriers built and converted through 2006. This volume is a valuable companion to the critically acclaimed Volume I, which covers aircraft carrier development and operations from 1909 to 1945.

rebecca grant aviation historian: *US Defense Politics* Harvey M. Sapolsky, Eugene Gholz, Caitlin Talmadge, 2020-12-30 This book provides an accessible overview of US defense politics for upper-level students. This new edition has been updated and revised, with new material on the Trump Administration and Space Force. Analyzing the ways in which the United States prepares for war, the authors demonstrate how political and organizational interests determine US defense policy and warn against over-emphasis on planning, centralization, and technocracy. Focusing on the process of defense policy-making rather than just the outcomes of that process, US Defense Politics departs from the traditional style of many textbooks. Designed to help students understand the practical side of American national security policy, the book examines the following key themes: US grand strategy; the roles of the president and the Congress in controlling the military; organizational interests and civil-military relations; who joins America's military; what happens to veterans after wars; how and why weapons are bought; the management of defense and intra- and inter-service relations; public attitudes toward the military; homeland security and the intelligence community. The fourth edition will be essential reading for students of US defense politics, national security policy, and homeland security, and highly recommended for students of US foreign policy, public policy, and public administration.

American carrier air power is now able to conduct coordinated deep-strike missions well beyond coastal reaches. rebecca grant aviation historian: Air Power Stephen Budiansky, 2005-03-29 No single human invention has transformed war more than the airplane—not even the atomic bomb. Even before the Wright Brothers' first flight, predictions abounded of the devastating and terrible consequences this new invention would have as an engine of war. Soaring over the battlefield, the airplane became an unstoppable force that left no spot on earth safe from attack. Drawing on combat memoirs, letters, diaries, archival records, museum collections, and eyewitness accounts by the men who fought—and the men who developed the breakthrough inventions and concepts—acclaimed author Stephen Budiansky weaves a vivid and dramatic account of the airplane's revolutionary transformation of modern warfare. rebecca grant aviation historian: Inferno Joe Pappalardo, 2020-12-01 Joe Pappalardo's *Inferno* tells the true story of the men who flew the deadliest missions of World War II, and an unlikely hero who received the Medal of Honor in the midst of the bloodiest military campaign in aviation history. There's no higher accolade in the U.S. military than the Medal of Honor, and 472 people received it for their action during World War II. But only one was demoted right after: Maynard Harrison Smith. Smith is one of the most unlikely heroes of the war, where he served in B-17s during the early days of the bombing of France and Germany from England. From his juvenile delinquent past in Michigan, through the war and during the decades after, Smith's life seemed to be a series of very public missteps. The other airmen took to calling the 5-foot, 5-inch airman "Snuffy" after an unappealing movie character. This is also the man who, on a tragically mishandled mission over France on May 1, 1943, single-handedly saved the crewmen in his stricken B-17. With every other gunner injured or bailed out, Smith stood alone in the fuselage of a shattered, nameless bomber and fought fires, treated wounded crew and fought off fighters. His ordeal is part of a forgotten mission that aircrews came to call the May Day Massacre. The skies over Europe in 1943 were a charnel house for U.S. pilots, who were being led by tacticians surprised by the brutal effectiveness of German defenses. By May 1943 the combat losses among bomb crews were a staggering 40 to 50 percent. The backdrop of Smith's story intersects with some of the luminaries of aviation history, including Curtis Lemay, Ira Eaker and "Hap" Arnold, during critical times of their storied careers. *Inferno* also examines Smith's life in a new, comprehensive light, through the use of exclusive interviews of those who knew him (including fellow MOH recipients and family) as well as public and archival records. This is both a thrilling and horrifying story of the air war over Europe during WWII and a fascinating look at one of America's forgotten heroes.
